

PLAYER PROP DOMINATION PROTOCOL V1.0

1. THE "USAGE" RULE

- **Injury Correlation:** If a star player is OUT, look for the "Usage Bump" on the #2 option (e.g., If Star WR is out, bet the OVER on the Slot WR).
- **Minutes Restriction:** Never bet an OVER on a player just returning from injury (minutes limit risk).

2. THE MATCHUP FILTER (DvP)

- **Defense vs. Position (DvP):** Always check how the opponent defends that specific position.
- **Example:** If playing a team ranked 30th against Centers, bet the OVER on the Center's rebounds/points.

3. THE "LAST 5" TRAP

- Do not blindly trust the "Last 5 Games" average. Bookies inflate lines based on recent hot streaks.
- Look for **Regression to the Mean:** If a player scored 40, 35, 42 recently but averages 22, look for the UNDER or a fade.

4. BLOWOUT RISK

- Avoid OVER bets on stars in games with a spread larger than -12. If the game is a blowout, starters sit the 4th quarter, killing the prop.
